## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 22-33 and 72-82, drawn to a system for verifying the authenticity of an object comprising a signal source and three subsystems, classified in class 359, subclass 559+.
  - II. Claims 34-53, drawn to a method of verifying the authenticity of an object comprising encoding, convolving, transforming, and correlating images, classified in class 382, subclass 100.
  - III. Claims 54-71 and 83, drawn to a method of encrypting a set of data, classified in class 380, subclass 54.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as optical processing. Invention II has separate utility such as image recognition. Invention III has separate utility such as data encryption. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2625

4. A telephone call was made to George J. Lyman, Registration No. 44,884, on October 29, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
